

# The Beta Bed Kit™

## KEY FEATURES

- Light & compact packaging for ease of transport
- Mounts vertically or horizontally
- Heavy duty, precision manufactured tested to 10,000 cycles
- Spring balance lift mechanism
- Designed to accommodate a wide range of bed sizes
- Adjustable tension to balance

Our Beta Bed™ system provides the necessary hardware to allow you to build a wall-bed within a wooden cabinet. These kits are proving extremely popular across Europe & America, allowing cabinet builders to utilise their skills & material resources complimented by the BETA Bed™ components & plans.

The BETA Bed™ is an extremely cost-effective method of building a wall-bed. Instead of purchasing metal frames and slatted lying surfaces from us, you construct the bed frame from timber with the BETA Bed™ kit providing the hinges, counter-balance and ingenious universal leg system. The design includes our heavy duty, easy operation lift mechanism and Trip-Free leg system and is designed to exceed the strength of aluminium. Full instructions are provided.

This unique kit is the perfect solution for those with space restrictions who would ordinarily be unable to consider using a standard sized wall-bed. Our Beta Bed™ systems allow the user to create a Small Single, Single, Small Double, Double, King or Queen sized bed and the versatility of the design gives the user the option to mount the frame in the vertical or horizontal mode.

Limited 5 YEAR warranty on manufacturer defects. Misuse, abuse, or damage by misapplication are not covered. Please note: wall bed frames and mechanisms are illustrated with cabinets and doors (purchased separately) for demonstration purposes only.
